

Four reasons your D-Ribose should be Bioenergy Ribose®

1. It's the only Ribose that's GRAS (Generally Recognized as Safe).

As you undoubtedly are aware, D-Ribose is getting a lot of attention in supplement, food and beverage nutrition markets of late because of its unique ability to restore cellular energy and improve quality of life. However, only Bioenergy Ribose is FDA GRAS affirmed. Ordering from other sources may lead to an inferior product.

2. It's the highest quality in the industry.

Purity levels of Bioenergy Ribose have gone up over the years. It now averages over 99% pure. Bioenergy Life Science, Inc. conducts rigorous quality assurance tests to meet customer's needs.

3. We are The Ribose Company™, with the scientific and product development experience to support you.

Attached are references to a few of our representative patents. Any product containing Ribose and designed for increasing or replenishing energy, alleviating soreness or cramping, building lean muscle mass, improving athletic performance, supporting heart health, alleviating symptoms of myalgia, or any other application covered by our patent portfolio, must contain only Bioenergy Ribose.

And, perhaps most importantly...

4. Our patents require it!

- Some unscrupulous manufacturers and distributors have begun selling Ribose in the United States to a variety of customers, making various energy products in these markets. What purchasers of this Ribose may not know, its use in this manner violates Bioenergy Life Science's extensive Patent Portfolio, which we have worked long and hard to develop and of which we are justifiably proud. It has taken tremendous resources to create this portfolio, including the science that backs it up.
- We never have believed in being confrontational with the industry. In every instance where we have discovered an infringing use, we have very amicably and satisfactorily converted the user to Bioenergy Ribose.
- We still want to work with those who have been misled into purchasing infringing Ribose, but effective immediately, we will more aggressively enforce our patent position since sellers of illegal Ribose are proliferating. At the same time, we are implementing significant new measures to assure that all Ribose in our patent protected applications is indeed Bioenergy Ribose and are devoting considerable resources to identify infringing products.
